

Chakras' energies deficiencies as the cause of dyspnea post COVID-19 treatment.

Huang Wei Ling

Medical Acupuncture and Pain Management Clinic, Franca, São Paulo, Brazil

Abstract:

Introduction: There are cases reports in literature showing patients with dyspnea symptoms after the treatment of coronavirus. In traditional Chinese medicine (TCM), symptoms of dyspnea may be associated to the energies deficiencies in other organs (Kidney, Heart, Spleen or Liver).

Purpose: To demonstrate that patients with dyspnea post coronavirus infection treatment can be related to the energy deficiencies on the chakras meridians, possibly worsened by the diet and type of treatment done. The replenishment of the chakras energies is the main principle to correct dyspnea in this kind of patient.

Methods: Two clinical case report. The first of a 58-year-old female patient, obese. It was found that the patient had had COVID-19 in august 2020, and was treated making use of the hydrochloroquine and azithromycin, not requiring hospitalization. She began with symptoms of dyspnea 15 days after the treatment done, mainly at the end of the afternoon. In TCM her diagnosis was Kidney-Yang deficiency. She was submitted to a radiesthesia procedure, to measure the energy of the chakras, and the results shown that her chakras 1 to 6 were in the minimum level (rated one out of eight). The second case report was a 52 years old woman with history of COVID-19 infection and she was treated with ivermectin and other symptomatic medications. After 17 days after her treatment, she began with dyspnea symptoms at the end of afternoon. She also had chakras energy measurement prior to her infection that also demonstrated that all her chakras were in the lowest level of energy. Treatment of both patients was started with homeopathy medications, to replenish the energy of the chakras, according to the theory created by the author entitled Constitutional Homeopathy of the Five Elements based on Traditional Chinese Medicine. Chinese dietary counselling, auricular acupuncture and apex ear bloodletting were performed.

Results: The dyspnea symptoms disappeared completely of both patients with the proposed treatment.

Conclusion: In patients with chakras energies deficiencies, that received treatment with high-concentrated medications for coronavirus infection, there may be propension to dyspnea post-treatment, as the high-concentrated medication treatment will harm the vital energy of these patients that are already low, as demonstrated on these two cases reports. The use of high-diluted medications is important to be able to replenish the energy of the deficient chakras, so the cause of dyspnea is treated on its root.

Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist. Once in charge of the Hospital Infection Control Service of the City of Franca's General Hospital, she was responsible for the control of all prescribed antimicrobial medication and received an award for the best paper presented at the Brazilian Hospital Infection Control Congress in 1998. Since 1997, she has been presenting her work worldwide, working with the approach and treatment of all diseases of all systems of the human body in a holistic way, with treatment guided through the teachings of Traditional Chinese Medicine and Hippocrates.
